Re: Electric Service Availability, Park 53 Business Park, Barrow County, Georgia

Dear Mr. Herring,

Walton Electric Membership Corporation (Walton EMC) is pleased to provide electric service information to assist you with your GRAD site certification application.

Walton EMC is the electric service provider for the Park 53 Business Park located in Barrow County, Georgia at the intersection of University Parkway (State Route 316) and State Route 53. Walton EMC currently has 3-phase electric distribution facilities on site with capacity up to 8 MW. The existing infrastructure can be extended to service the entire Business Park development.

A 115 kV transmission line is located 1.8 miles from the site. Transmission service could be built to the site in approximately 12 months of a customer request. This transmission network can easily support significantly larger loads in excess of 8 MW. We would need specific new customer requirements to address if any upgrades would be needed for larger loads.

Customers with a connected load over 900 kW will be considered "customer choice" providing the customer the opportunity to choose their power supplier.

If you need additional information or have any questions please contact me at my office (678) 639-3222 or email: swalker@waltonemc.com.

Sincerely,

Scott S. Walker
