

9. Survey

Data Required:

- *The preferred material is a topographic map of the site by a qualified professional showing basic boundaries and topographic features at two-foot intervals as typically done via aerial survey. However, given that such a survey is expensive, GDEcD has agreed that this specific requirement may be waived. If the requirement for a two-foot interval survey is waived, the applicant must provide a graphic which clearly shows site boundaries, general topography, and major physical features, both natural and constructed on a scale sufficiently large to be reviewed in detail.*

The Barrow County Geographic Information System Department provided the topographic information over the course of the past few months. Please see the Light Detection and Ranging (LIDAR) topographic exhibit and boundary survey included in Tab 9.

- *It is highly desirable but not required to include any available aerial photographs of the site.*

An aerial exhibit showcasing the site location and other features can be found in Tab 9.
